

After many clients have enquired regarding CCTV system to work along side their POS system, HostPOS began the search for a suitable solution. After many months of research we have found a solution that delivers all the benefits and at a cost efficient way.

### **CCTV System**

What is CCTV?

Closed circuit Television (CCTV) is a visual surveillance technology with the capability to monitor a variety of environment and activities. A communication link that is generally used between the CCTV security camera and monitor and can include a full pan, tilt and zoom functionality. A CCTV security camera can be remotely operated from a control room. Security can be greatly improved by using a security camera. The cameras can detect an intruder when the viewer senses movement, by verifying if an alarm signal is real and by monitoring constant surveillance areas.

DVR integrates CCTV cameras, monitoring, remote video monitoring and lapse time record into a single unit. Eliminates the need for video tapes so time wasted rewinding or fast forwarding to a particular time frame is eliminated. DVR enables you to view your property anytime, anywhere with the right software and enables a digital recording of events, should you require it.

### **Out of view doesn't have to mean out of sight**

CCTV camera surveillance is an important element of management and security control. Recent advancements in security camera and digital video recording have made CCTV camera and video surveillance one of the most valuable security and loss prevention solutions available. CCTV security systems are now reliable, efficient and simple to use. The PC link system can be tailored to suit your needs, with our extensive range of state of the art equipment.

### **Benefits**
