

RedCat SmartPOS

Once you use this hospitality-specific point of sale software, you will see immediate improvements in how your business operates. In fact, you will soon wonder how your business operated without it.

RedCat SmartPOS is a reliable and simple to use point of sale system that has been used by thousands of Australian and international hospitality businesses for over 18 years. It has remained a popular choice in the hospitality industry because it is proven to increase floor efficiency and save you valuable time by generating business reports at the touch of a screen. With SmartPOS, front-of-house service becomes a fast, efficient and accurate operation, and the back-of-house is taken care of by the system's full management control capabilities.

Other features include; full table tracking and mapping, ultra-quick split bill payments, and rapid ordering and payment capabilities that are particularly useful for fast food businesses, restaurants, bars and cafés. SmartPOS also has the ability to integrate with RedCat SmartLoyalty (no more cumbersome coffee cards), and helps to prevent theft by logging all transaction activity by operator.

This flexible point of sale solution from RedCat can be used as a stand-alone touch-screen terminal, a swivel touch-screen terminal (allowing access from behind and in front of the counter), or a roaming hand-held touch-screen unit. You have full control over the look and feel of the ordering screens, and you can have as many of them as you require.

Unlike many point of sale systems on the market, SmartPOS is designed specifically for the hospitality industry. As a result, it offers functions that have been proven to improve the management and service of any hospitality business.
