## Enhance your business with HostStock

---

HOSTPOS's hand-held stock control device is small and mighty. Replace those paper print-outs and time-hungry shelf-checks with HostStock. It delivers flexibility, ease of use and speed and is the perfect HOSTPOS partner to your point of sale software system.

HOSTPOS has over 30 years of experience in developing and supplying HOSTPOS systems with over 40,000 software licenses sold.

### **HostStock is the order of the day...**

Stay ahead of the game when you need to order new stock. Scan a barcode and tap in how many items you need. When the job's done, simply sync the system with HostOffice and you'll automatically create an order. It's a smarter way to work!

When your order arrives HostStock gives you the power to accurately and reliably check deliveries. After you've waved goodbye to the truck driver, head back to your desk and link HostStock up to HostOffice for an easy way to add the data to your stock list.

### **Count on HostStock to know the score....**

HostStock will check that the price on the shelf is also the price you're charging at the till. Simply scan a barcode to flag up any inconsistencies with your pricing. As an added bonus you can sync HostStock with HostOffice to easily generate a new shelf-edge label. No writing required and everything's back on track!

### **What else is in store for HostStock?**

When it comes to stock-take time you'll replace a forest of paper with a single hand-held HostStock unit.

HostStock scans everything, item-by-item. Count up what you have and key in the total, then connect HostStock to HostOffice for a no-effort tally on what's been sold. HostStock handles data effortlessly, enabling you to carry out a partial stock-take whenever you want. There's no need to check the store, because you'll be able to check one line of products instead.

### **One person's chips is another person's fries....**

Using HostStock when you stock-take means less duplication too. You aren't relying on staff knowing what every product is called. Instead you'll only scan the barcode... no names required and you can't count something twice.

### **What can be scanned in can also be removed, at the touch of a button...**

HostStock makes it easier to handle returns and waste goods because it's so simple to remove an item from your files. One touch of a button and it's like it was never there. Plus, when you use HostStock alongside HostOffice, the changes can also be updated to the rest of your databases.
