

HOSTPOS for Hotels

HOSTPOS products that should be used in a hotel:

- **HostPoint:** This is the hotel touch screen till and forms the central part of any HOSTPOS System.
- **HostOffice:** This is optional HOSTPOS software than can be run on the back office or home pc and allows you to get extended reports over the standard tilling reports, better stock control and full product file maintenance.
- **PocketHost:** PocketHost is a digital handheld ordering device that allows your staff to take your hotel touch screen till system directly to your customers and allows them to be served without having to visit the bar area.
- **HostLoyalty:** Offers enhancements to the standard loyalty system already found in HostPoint; this is especially useful if you run an estate of hotels.

Hotel PMS Interface

The HostPoint hotel property management system interface enables guests staying in your hotel to post their purchases at the bar to your existing hotel system so that they can be paid for at the end of their stay when they check out of the hotel.

The vast majority of Hotel PMS systems available on the UK market have added an HOSTPOS interface or have a method of interfacing with HOSTPOS. If you wish to know whether your existing PMS System has an interface please contact either us, your HOSTPOS dealers or your PMS Supplier. Alternatively we can supply a list of recommended PMS systems.

For more information on what makes HOSTPOS a perfect HOSTPOS system for your Hotel please follow the HOSTPOS HOSTPOS system for Pubs and HOSTPOS for HOSTPOS system Restaurant links.
